Turley's Precast Concrete Septic Tanks:

- **Are strong, durable and watertight**
- **Are easy to install – shallow dig design**
- **45 N concrete strength**
- **Utilise large volume capacities**

SPECIFICATIONS

The Turley Septic Tank

- Certified to EN12566-1
- 3400 Litre Capacity
- 45 Newton Concrete
- 4.7 Tonnes in Weight
- Up to 8 PE
- Length 3500mm
- Width 1300mm
- Height 1700mm (including lid and riser)
- Inlet 1310mm from bottom of tank (Invert level)

Turley's septic tanks are built to last. Unlike plastic and fibreglass alternatives, our precast concrete tanks are strong, durable and watertight. Furthermore, due to the nature of precast concrete, our tanks gradually strengthen over time.

Meeting all the definitions and mandatory standards of a septic tank in the European Union, our EN125661 certified Turley septic tank has a capacity of 3,400 litres. That's enough to solve the sewage disposal problem of an eight person home.

Concrete septic tanks are the ideal preferred storage vessel for on-site septic storage and treatment.

The Turley Septic Tank is made up of high strength 45 Newton concrete, and weighing in at 4.7 tonnes, is manufactured and

supplied from Turley's state of the art facility in Newry Co. Down. Whilst you can be reassured as to the robustness and effectiveness of our tanks, you don't need to worry about installation. Turley Bros will make the installation process easy and will install on site.

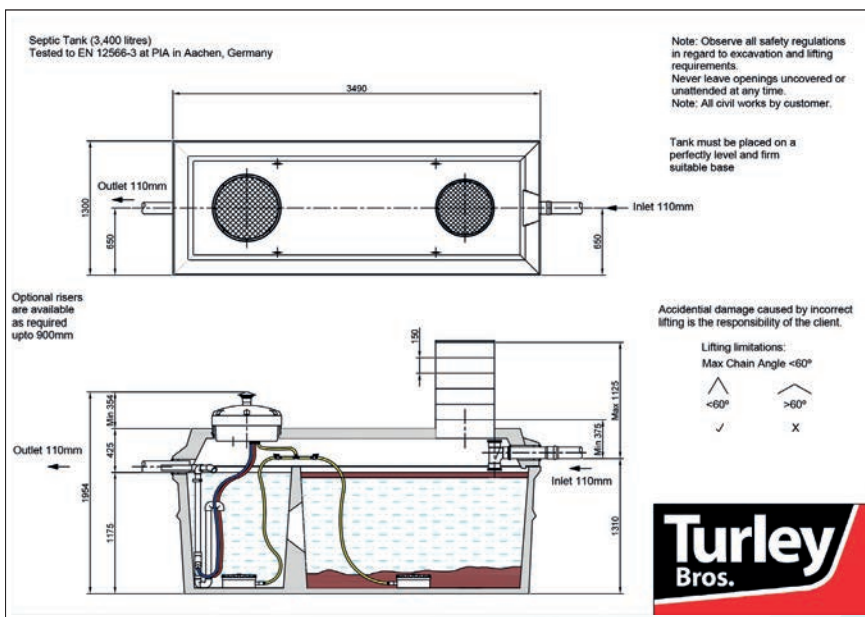

The high strength concrete tank design makes it free from seepage, leaking, and intrusion risks commonly

caused by roots from the vegetation in the vicinity and the acidity of the sewage. The Turley Septic Tank is designed with heavy duty HDPE risers and access covers, ventilation access, bitumen seal and pipe seal facilities at the inlet and outlet ends, is an ideal choice for not only new installations, but also is the tank of choice for replacement or upgrading of an existing tank.

Turley Bros are proud to announce that our Tank conforms to the current Standards of Environmental Practice as per the EPA Code of Practice and has achieved European EN 12566-1 certification.

Turley's Concrete Advanced Water Treatment Tanks:

- Are durable and affordable
- Utilise the latest water treatment equipment
- Have high effluent quality of 99% BOD
- Utilise natural bacteria
- We can offer advice on Consent to Discharge

Turley's waste water treatment system tanks are durable and easy to install and can be utilised in those areas where the percolation area of the septic system does not meet the filtration requirements in terms of soil porosity.

The modern water treatment plant system fitted inside the concrete tank is protected by the robust concrete exterior.

PROCESS

Waste water enters through a calming inlet, minimizing disturbance. Inflowing wastewater is being intermittently aerated in both chambers.

This process reduces the overall sludge production. The total tank volume is being utilized as Reactor/ Sludge storage/ and buffer at different times within the 12 hour cycle.

This same 12 hr cycle enables the system to minimize the probability of hydraulic peaks occurring during sedimentation or clearwater discharge.

Turley Advanced Water Treatment System – EN 12566-3

Turley's Advanced Waste Water Treatment Systems combine the benefits and the durability from a concrete tank and the trusted performance of our SBR treatment kit.

Certified to be in compliance with the EN 12566-3 and the recent SR66 regulations.
